

Aaron Ky-Riesenbach

+1 (626) 689-5025 | Medford, MA | aaron@kyriesenbach.com | github.com/aaronkyriesenbach

Infrastructure engineer with 5+ years of experience in cloud SRE and DevOps; currently managing a global platform of 50+ Kubernetes clusters across AWS and Azure with a focus on GitOps, automation, and observability.

SKILLS

- **Technologies:** Kubernetes, ArgoCD/GitOps, OpenTelemetry, Terraform/IaC, GitHub Actions, Azure Pipelines, LLMs/agent development, AWS, Azure, Linux, Docker/Containerization
- **Programming:** TypeScript, Terraform/HCL, Go, Bash, Helm, Python, Java

EXPERIENCE

Product Software Engineer, DevOps/Cloud SRE

Jul 2024 — Present

Wolters Kluwer

Waltham, MA - distributed team

- Expands and administrates global Kubernetes platform comprised of ~50 clusters worldwide - focus on automation to enable self-service deployments without cognitive overhead
- Creates custom Helm charts reducing workload deployment configuration from hundreds of lines to as few as 10
- Develops Kubernetes operators with comprehensive unit and integration test coverage to automate cluster bootstrapping, bringing time-to-deployment from days to < 1 hour
- Participates in on-call rotation and incident response, providing rapid incident triage and support for developers
- Builds multi-cloud expansion solutions for WK's in-house AI platform to meet shareholder requirements
- Writes opinionated Terraform modules (50+) to support consistent deployment across clouds and product lines
- Designs and implements comprehensive cross-subscription/account RBAC and networking architecture, enabling secure connectivity with least-privilege defaults
- Maintains MySQL servers, ProxySQL services, and Ansible + AWX instrumentation for DB team
- Designs and deploys in-depth logging and tracing instrumentation across clusters using OpenTelemetry and DataDog, taking apps from zero observability to logs + traces + metrics with no developer overhead
- Mentors junior employees by providing technical guidance and advising on areas for growth

Electrical and Software Engineering Co-Op

Jul 2023 — Jun 2024

Massa Products Corporation

Hingham, MA

- Implemented MQTT-based messaging using AWS IoT to aggregate customer data and device metrics
- Created React-based application with AWS DynamoDB for users to configure and manage deployment of commercial products
- Managed deployment of configuration platform using EC2, Lambda, and Amplify with automated branch-based CI/CD

Software Engineer, QA Test Engineer

Mar 2020 — Aug 2021

Tesla Government

Falls Church, VA

- Performed and validated production deployments to AWS infrastructure (EC2)
- Managed Git-based multi branch pipeline CI/CD system via Jenkins to automate deployment processes
- Built features for knowledge management platform (TypeScript/React, Java/Spring Boot) and developed a full automated testing suite using Selenium, reducing pre-release testing from days to hours

EDUCATION

Northeastern University

Sep 2021 — May 2025

Bachelor's of Science, Computer Engineering

Boston, MA

- GPA: 3.9/4.0 | Dean's List

PROJECTS

Home Lab

Dec 2024 — Present

- Architects and maintains a high-availability Kubernetes environment in the home
- K3s cluster managed using GitOps practices
- Custom config management tools using TypeScript to provide declarative, high-quality workload configuration in-cluster
