- **Programming:** TypeScript, Terraform/HCL, Go, Bash, Helm, Python, Java

CAREER

Product Software Engineer, DevOps/Cloud SRE

Jul 2024 — Present

Wolters Kluwer

Waltham, MA

- Expands and administrates global Kubernetes platform comprised of ~50 clusters worldwide
- Creates custom Helm charts, Kubernetes operators, and other cloud-native tooling to support automated product deployment
- Proposes, researches, and implements automation, functionality, and security improvements to platform and processes
- Runs team-wide architecture/knowledge transfer meetings for new platform features and development
- Builds multi-cloud expansion solutions for WK's in-house AI platform to meet shareholder requirements
- Writes opinionated Terraform modules to support consistent deployment across clouds and product lines
- Designs and deploys in-depth logging and tracing instrumentation across clusters
- Mentors junior employees by assigning work, providing instruction, and advising on areas for growth

Electrical and Software Engineering Co-Op

Jul 2023 — Jun 2024

Massa Products Corporation

Hingham, MA

- Built and managed AWS-based web services, including IoT services and Lambdas, to support customer configuration and deployment of products
- Created React-based application with AWS DynamoDB for users to configure and manage deployment of commercial products
- Designed schematics and circuit boards using OrCAD/Allegro for a variety of commercial products and test fixtures
- Maintained and improved WinForms-based internal applications used for prototype configuration, R&D, and data analysis

Software Engineer, QA Test Engineer

Mar 2020 — Aug 2021

Tesla Government

Falls Church, VA

- Performed and validated production deployments to AWS infrastructure
- Managed Git-based multi branch pipeline CI/CD system via Jenkins
- Created new features for microservice-based knowledge management service with TypeScript/React and Java/Spring Boot/MySQL
- Performed manual functionality and security tests for services, developed complete automated test suite using Selenium

EDUCATION

Northeastern University

Sep 2021 — May 2025

Bachelor's of Science, Computer Engineering

Boston, MA

- GPA: 3.9/4.0 | Dean's List

PROJECTS

Home Lab

Dec 2024 — Present

- Architects and maintains a high-availability Kubernetes environment in the home
- Proxmox based multi-node hypervisor cluster for high redundancy and failover capability
- K3s cluster managed using GitOps practices
- Custom config management tools using TypeScript to provide declarative, high-quality workload configuration in-cluster
- Industry-standard tools like cert-manager and external-dns used for certificate and DNS management

INTERESTS

- Outdoor activities - hiking, climbing, biking, skiing
- Bluegrass music - guitar, mandolin, violin
